

# Download A Nursing Guide To Adult Moderate Sedation

Moderate Sedation/Analgesia (Formerly referred to as “conscious Sedation”) is a drug-induced depression of consciousness during which patients respond purposefully to verbal commands, either alone or accompanied by light tactile stimulation. Moderate Sedation: Risks and Challenges WWW.RN.ORG® Reviewed May, 2017, Expires May, 2019 Provider Information and Specifics available on our Website The Administration of Moderate and Deep Sedation: Legal, Ethical Issues for Non-Anesthetist RNs. By Michael R. Eslinger, CRNA, APN, MA. The advent of same day surgery centers and the rise in office based procedures requiring moderate sedation rose dramatically in the 1980s and continues at a rapid pace today. Availability. 5 mg hydrocodone usually with 500 mg or more acetaminophen. Actions. Morphine derivative similar to codeine but more addicting and with slightly greater antitussive activity, and analgesic effect.
