

# Download Bone Markings Study Guide

Yellow bone marrow is made up of fat, or adipose cells. Yellow marrow is only found in the medullary cavity. When we're young, all the bone marrow in our bodies is red bone marrow. Course Overview This study guide is an outline of content that will be taught in the American Heart Association Accredited Pediatric Advance Life Support (PALS) Course. Mitochondrial diseases are a group of disorders caused by dysfunctional mitochondria. They result from failures of the mitochondria. Since mitochondria are responsible for creating more than 90% of the energy needed by the body to sustain life and support growth, when they fail, less and less energy is generated within the cell. Hey, everyone. It's Matt from Kenhub! And in this tutorial, we will discuss the anatomy, definition, and function of the humerus. The humerus is a long bone that connects the elbow to the shoulder blade.
